Sysdyne's Pioneer Cloud Batch Featured in Concrete Products Magazine

[Concrete Products Magazine Original Article](#)

Unveiled at World of Concrete 2021 as an alternative to traditional, local computer-hosted solutions, the **Pioneer Cloud Batch** platform brings batch software online! This new innovative technology helps speed up the batch process and reduce costs by tightly controlling the material usage.

World's First Cloud Batch

By logging onto Sysdyne's ConcreteGO.com dispatch portal through mobile or desktop devices, plant or quality control managers, executives, and IT support staff can use Pioneer Cloud to access batch plant controls anywhere at any time to monitor batch cycles; make mix design changes as needed; and, address individual truck loading issues without interfering in the actual production queue.

"Cloud-native products focus on operational reinvention by optimizing end-to-end process performance and improving efficiency," says **Jill Zhang, President of Sysdyne**. "The single data platform of concrete batch, dispatch, GPS, and delivery management sets the foundation for real-time data analysis and prediction. Together it enables a fundamental shift in how a concrete producer operates so that it can be well-positioned for profitable growth in a highly competitive industry."
