## What Is a Concrete End-to-End Solution (E2ES)?

An end-to-end solution ("E2ES") means that the provider of an application program, software, and system provides all the software and hardware requirements to the customer, thus eliminating the need for additional vendors.

For a concrete company, an E2ES manages workflow from the first contact with the customer until the final payment is received. The E2ES package includes setup, integration,

and installation. It delivers a complete solution without the need for additional software to support it.

This eliminates any unnecessary steps in the workflow and, in turn, enhances the efficiency of businesses. Sysdyne's End-to-end concrete solutions offer a range of service features and are cloud-native, providing a single source of truth, or in other words, a centralized data solution.

#### **What are the benefits of an end-to-end solution?**

- Take a look at the whole picture
- Make informed decisions
- Streamline processes and decrease duplication

Looking for an E2ES for ready mixed concrete? [Contact Sysdyne today](#) to find out how we can help you.
