## Scaling Your Business With Advanced Division Settings

The management and operation of multiple concrete plants presents a variety of challenges. As your business grows, Sysdyne's ConcreteGO cloud dispatch system and iStrada GPS delivery management platform are designed to simplify the management of multiple divisions within the same organization.

# ADVANCED DIVISION SETTINGS

BE PREPARED FOR GROWTH  
WITHIN YOUR ORGANIZATION

[LEARN MORE](#)

ConcreteGO and iStrada sync division settings, projects, customer details, truck details, items, real-time delivery statuses, employee details, employee clock-in / clock-out information, orders, tickets, and batch weights. A producer with operations in multiple regions can control access to their data by granting or denying designated staff access to this information.

Dispatchers in one division may or may not be allowed to look at orders and trucks from other plants or divisions, depending on company policy. Access to plants and locations within the workplace is limited to authorized users, resulting in improved productivity and security in the workplace, as well as better communication within the organization.
