Single Vendor vs. Multi-Vendor: Factors To Consider - Part I

Over the past year, we've published multiple articles on how Cloud-native software can help drive down costs while automating business processes. Unlike 10 years ago, there's now a consensus that Cloud-native solutions are the way to go.

There are many concrete producers who are looking for cloud-based batch, dispatch, and GPS software alternatives to their current on-premise systems. There is now another challenge to be resolved: How do you decide between engaging a single vendor or multiple vendors to automate all the myriad tasks that can benefit from Cloud technology adoption?

Here are some factors to consider when deciding single vendor vs. multi-vendor:

1. Best-of-breed product
2. Implementation
3. Integration
4. Cost
5. Product Updates
6. The Blame Game
7. SSO (Single-Sign On)
8. Business Intelligence
9. Customer Support

This article examines factors 1-6 in detail, with a second article coming out tomorrow covering factors 7-9.
