e-Ticketing Improves the Efficiency and Cost-Effectiveness of Concrete Transport

In the concrete construction industry, everything happens in real-time. Throughout the day, Producers and Contractors must make immediate decisions about project work, and there is only so much time until the concrete hardens.

Up until recently, Producers and Contractors did not have access to real-time delivery management tools such as the **iStrada** Delivery Management Platform. When concrete

deliveries and project details are not current, things can go wrong very quickly, increasing stress and costs.

It is important that concrete Producers have documentation to support themselves in the event of a problem, or they risk losing a customer. Paper tickets have long been inefficient for managing concrete deliveries. The use of electronic tickets, or e-Tickets, helps to improve safety, reduce errors, save time, and optimize workflows.
