

LEADING CLOUD SOFTWARE PROVIDER FOR THE CONCRETE INDUSTRY

What You See Is Not Always What You Get

Why are some GPS tracking systems laggy with truck locations?

In most cases, latency is caused by GPS systems updating the truck's location in intervals. For example, certain GPS systems on the market update truck locations every 3-5 minutes and not in real-time, which can cause Producers and their Customers confusion and frustration.

With **iStrada's** GPS, truck locations are updated in real-time, not on a scheduled basis. The location accuracy can be set as low as 3 feet, so as soon as the truck moves 3 feet or more, the location will be updated on the map. Below is a screenshot demonstrating the real-time location updates that are possible with iStrada.

App & GPS

GPS Features: Enabled
(deprecated)

Manual Ticket Status Change:*

Status change min. speed:
("Pouring"/"Washing" => "To Plant") Mph

Location Accuracy:*
 High (~5-10 m)
 Low (~100 m)
 Normal (~10 m)
 Best (~1-5 m)

Map type (iOS only):* Google Maps iStrada Maps

Map view:* Satellite Map

iStrada is more than just a GPS truck tracking system. Concrete delivery is managed by the software starting from the point the truck is loaded including driver time and attendance, DVIR, and Paperless Ticketing. In addition, it offers the iStradaView platform, which allows contractors and inspectors to access e-Tickets, orders, and delivery updates in real-time using their phone.

Real-time truck tracking platforms have evolved from an emerging technology to an integral part of modern business. Regardless of the size or the location of the company, quality location data offers extensive and far-reaching benefits. It is because of this rapid growth that you will want to select a platform that will make you stay competitive in the market and be able to scale with you as you grow.

**REAL-TIME LOCATION
UPDATES SAVE TIME,
EFFORT, AND MONEY.**
